

Mobile device users and fill in the blank pdf files. My new android tablet came with 2 different pdf readers both allowed me to view the file but not enter any data. I searched and found a free app web site that allows you to select your type of device and download the free app. They have separate app for: Android phone and tablet, Windows phone and tablet, or iphone and ipad.

The company that made the apps is called: XODO TECHNOLOGIES INC.

There website is: xodo.com and you can find the mobile devise on the bottom of there main page.

You may also find your own app that allows you to fill and save and email.
